

Reporting & Analytics

Building Engines puts all your property data at your fingertips - from real-time snapshots of broad operational areas, to detailed performance trend reports and annual summaries (all filterable by building, portfolio, region, occupant, vendor, or personnel).

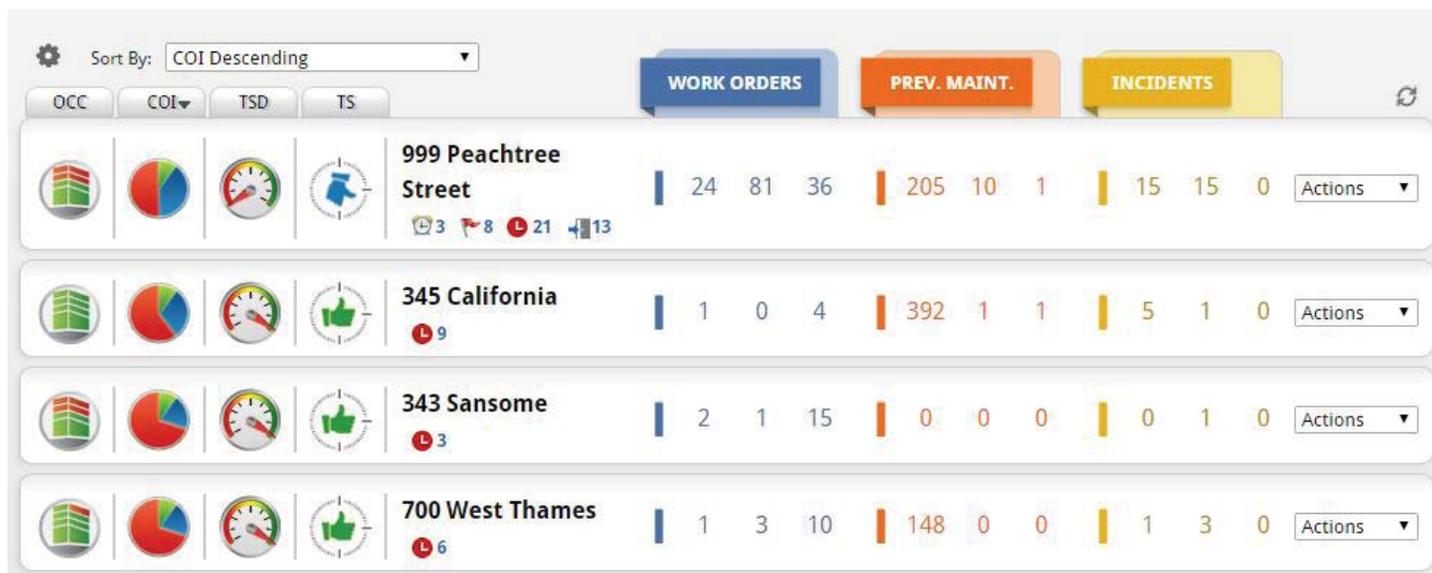

We understand that you need more than a pretty chart. You need actionable intelligence that you can use to monitor the health of your buildings and the service you provide. Building Engines empowers property owners and managers to capture, communicate, measure, report and act on every aspect of property and tenant management.

REPORTING OPTIONS

- At-A-Glance Dashboard
- Performance Management
- Standard Reports
- Custom Reports (The Grid)

Your Business. At-a-Glance.

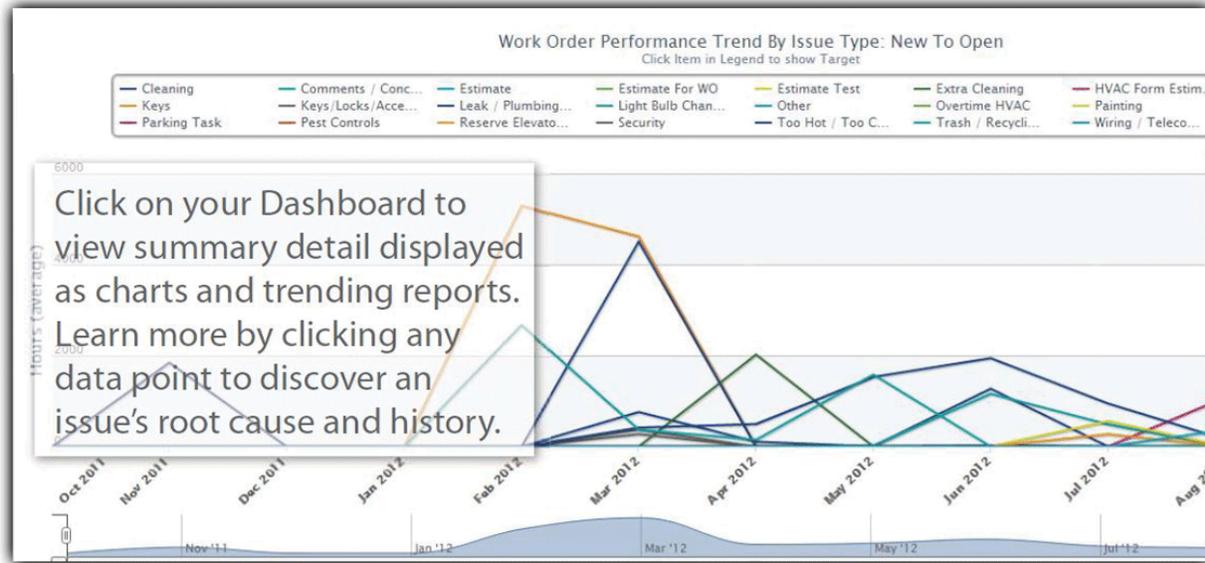

The configurable **At-A-Glance Dashboard** takes the underlying data from daily operational tasks and transforms it into real-time views of key metrics — what's most important to particular users to manage their day. Icons on the dashboard represent performance results against targets and benchmarks that you set.

Filter Out the Noise and Manage By Exception

Custom Reports (The Search Grid)

Throughout the Building Engines Platform, users have access to a “pop-out” search grid that allows them to create and print customized in-the-moment reports and list views- without ever having to leave what they are working on. This is simple, “ad-hoc” reporting your team can actually use!

2	Tur...	09/28/2012	Vendor {QA-DO ... \$100.00

Reporting & Analytics

Standard Reports

Building Engines provides dozens of ready-made standard reports from every functional area of the application.

- Personalize and access only the information you need, by creating and saving custom views.
- Schedule routine reports for automatic delivery.
- Export key information in multiple file formats (CSV, Excel, Word, PDF).

Operations Performance Management (OPM)

OPM measures service delivery against benchmark targets that you define, delivers “in-the-moment” visibility into performance, and utilizes real and current data to document and prove service delivery and tenant satisfaction.
