

# Fire & Life Safety Engine™

## Our Engine can Help You Reduce Your Exposure & Ensure Compliance

- Easily schedule, track, and document all of your fire and life safety events
- In case of disaster, keep your records safe & secure with Tier I off-site data storage
- Keep everyone informed with 'at a glance' calendar views of critical dates and events
- Automate your fire & life safety event reminders & set escalations for missed events to make sure you're not in the dark if the lights go out
- Reach everyone quickly in case of an emergency with text & email broadcast messaging
- Create communication groups to send critical messages to key responders and managers
- Historical reporting provides an audit trail & assures your regulatory compliance
- Make your clients feel safe with a professionally managed, state-of-the-art program

**Y**ou hope it never happens, but you know how important preparation and documentation is toward mitigating the effects of an emergency situation.

Building Engines offers a unique and flexible *Fire & Life Safety Engine* that enables healthcare facilities directors to have a clear handle on their emergency safety practices.

Simple and efficient, this component automatically reminds the right people of important & required events and escalates notices to senior management when events are not completed on time.

In addition, you'll have all of your records and documentation stored in a secure, off site location so you can always demonstrate emergency preparedness and regulatory compliance.

Because this component is fully integrated into the application, you can leverage the same user interface, data, and workflows you use everyday into your emergency management program.

Should an emergency arise, everyone from client to first responder will have the information they need to adequately respond to the situation - and you'll have the documentation and information to back up your efforts.
